Medical Store Management System – Synopsis

1. Project Title

Medical Store Management System

2. Introduction

The Medical Store Management System is a web-based application developed to manage the daily operations of a medical store. It helps the administrator maintain medicine records, monitor stock availability, manage suppliers, record sales, and generate bills. The system reduces manual paperwork, improves accuracy, and saves time in managing the store.

3. Objectives

• To maintain a digital record of medicines.
• To simplify billing and sales management.
• To track medicine stock and expiry dates.
• To reduce manual errors in inventory management.
• To generate sales reports efficiently.

4. Problem Statement

Many small medical stores still use manual registers to maintain medicine stock and sales records. This can lead to errors, misplaced records, and difficulty in tracking expired or out-of-stock medicines. The proposed system provides an efficient computerized solution for managing medical store operations.

5. Modules

Module 1: Admin Login
• Secure login for administrator.
• Change password.

Module 2: Medicine Management
• Add new medicines.
• Update medicine details.
• Delete medicines.
• Search medicines.
• View stock availability.

Module 3: Supplier Management
• Add supplier details.
• Update supplier information.
• Maintain supplier records.

Module 4: Sales & Billing
• Select medicines.
• Calculate bill automatically.
• Generate and print invoice.
• Store sales history.

Module 5: Inventory Management
• Update stock after every sale.
• Display low-stock medicines.
• Track medicine expiry dates.

Module 6: Reports
• Daily and monthly sales reports.
• Stock report.
• Expired medicines report.
• Supplier report.

6. Software Requirements

• Frontend: HTML, CSS, JavaScript
• Backend: Python (Flask) or PHP
• Database: MySQL
• IDE: Visual Studio Code
